

Driving a **Higher Standard** in Indestructible Flow Transfer Standard Calibration

“ Our agency owns many DryCals, including the old DC2s, the newest calibrators, and now the Definer 110 Orifice.

I must say that I really like the Definer 110. It works better than the other one out there. One really good feature is the wind cover, which works very well. I've always had to take off my hat and use it as a wind screen before I got the Definer 110, but not any longer. It's a good unit. ”
